A Bag That Doesn't Let You Down

For 25 years, Dynamic Packaging has been a trusted partner to leaders across the agricultural, industrial, and retail sectors. We engineer high-performance woven PP and BOPP-laminated bags that protect your product's integrity and reinforce your brand's reputation throughout the supply chain.

Serving rice, pulses, flour, feed, fertilizer, and cement, our packaging delivers superior structural strength for bulk logistics, clean stacking in godowns, and clear trade identification. Every step — from raw fabric inspection to precision printing, lamination, and stitching — is managed in-house at our Tumkur plant.

One Facility. One Standard. Your Brand, Our Responsibility.

Why Mills & Agri Businesses Trust Us

Superior raw materials, every batch

Designed in-house, printed to perfection

One facility. Every format you need

Delivered on time, every time

Built to your exact spec, every order

Our Process

1. Idea & Concept

Tell us your product, your quantity, and the finish you need. We confirm the right bag construction and fabric spec before anything goes into production.

2. Design & Pre-Press

Our in-house team creates your artwork and prepares it for print. What you approve is what goes on press.

3. Printing

Your design goes on press with one focus: colour accuracy and consistency, every run.

4. Processing & Production

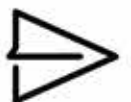

Inward fabric QC, lamination, cutting, gusseting, and stitching — every step handled in-house, to your exact bag spec.

5. Quality Analysis

Samples from every batch are checked before anything leaves. If it doesn't meet standard, it doesn't ship.

Dispatch

Types of Bags

Six ways to build your bag – pick based on what you're packing and what it needs to survive.

1. BOPP Laminated Bags

Printed BOPP film laminated onto woven PP fabric — combining photographic-quality print with the strength of woven PP. The standard choice for rice, pulses, flour, and grain bags. Available in single-side laminated (print in only one side) or double-side laminated (both faces, for extra strength and a fully finished look inside and out).

Suitable for : Rice, pulses, flours, general grains

Available to Pack : 5 kg – 50 kg

2. Metalized BOPP Laminated Bags

An additional metalized BOPP layer adds a premium metallic sheen and an enhanced moisture barrier over standard lamination. Used where shelf presence and extra protection both matter — premium rice brands, branded pulses.

Suitable for : Premium rice, branded pulses & dals, premium flour

Available to Pack : 5 kg – 50 kg

3. Window Metalized BOPP Bags

A premium metalized laminated bag, with metalisation in front, while transparent window is given in gusset so the product (grain, rice) is visible. while the front of the bag carries full metallic shelf appeal, In the window in gusset the grains will be visible. Lets the product sell itself.

Suitable for : Premium rice, specialty grains, gift-pack agri products
Available to Pack : 5 kg – 50 kg

4. BOPP Laminated Bags with Liner (PE Inner Liner)

A BOPP laminated woven bag fitted with an inner polyethylene liner for a additional moisture barrier. The standard specification for fertilizer, agrochemicals, and any hygroscopic (moisture-sensitive) product.

Suitable for : Fertilizer (DAP, NPK, Organic), agrochemicals, cement
Available to Pack : 5 kg – 25 kg

5. Flexo Printed Woven Bags

Woven PP bags printed directly using flexographic printing — with or without lamination. A cost-efficient option for mass commodity packaging where straight forward print quality (not photographic detail) meets the requirement. No cylinder cost for small print runs.

Suitable for : Cattle feed, poultry feed, unbranded/commodity-grade bulk packs
Available to Pack : 5 kg – 50 kg

6. PP Woven Unlaminated Bags

Plain woven PP sacks with flexo printing directly on the fabric, no BOPP lamination. The most economical option — allows air permeability, suited for products that need to breathe.

Suitable for : Cattle feed, poultry feed, low-cost bulk commodities
Available to Pack : 5 kg – 25 kg

Which Bag Fits Your Product?

Your Product	Recommended Bag	Recommended Finish	Why
Rice & Grains — Sona Masuri, RNR Kollam, Jeera, Boiled, Broken, etc.	BOPP Laminated (Single or Double-Side)	Glossy standard; Metalized or Window Metalized for premium brands	Sharp print builds shelf trust; dry grain doesn't need a liner
Pulses & Dals — Toor, Moong, Urad, Bengal Gram, etc.	BOPP Laminated (Single or Double-Side)	Glossy or Matte	Same handling and shelf needs as rice
Flours — Atta, Maida, Rice Flour, Ragi, Gram Flour, Sooji/Rava	BOPP Laminated; single-side economy option available	Matte or Glossy	Fine powder needs a tight weave and a secure stitched mouth to stop leakage
Cattle & Poultry Feed	Flexo Printed Woven / PP Woven Unlaminated	Standard flexo print	Breathable, economical — right fit for high-volume, price-sensitive product
Fertilizer & Agrochemicals — DAP, NPK, Organic	BOPP Laminated with PE Liner	UV-Treated recommended	Liner blocks moisture; UV protection matters for bags stored outdoors at dealer yards
Cement & Construction Materials	BOPP Laminated with PE Liner	UV-Treated recommended	Same reasoning as fertilizer — long outdoor storage, moisture-sensitive product

Finish & Print Options

Option	What It Does	Typically Used For
Glossy Finish	High-shine BOPP surface — sharp colour pop, premium retail look	Branded rice, premium pulses
Matte Finish	Non-reflective, soft-touch surface finish	Premium/ lifestyle positioned agri brands
3D / Spot Effect Printing	Raised or textured spot-print effect on selected design elements for shelf standout	Premium rice & branded commodities
Anti-Skid Treatment	Textured surface coating to reduce slippage when bags are stacked or palletized	Tall stacking — rice, flour, fertilizer, cement
UV-Treated Lamination	UV-stabilised film to resist fading and degradation under prolonged sun/outdoor storage exposure	Cement, fertilizer, outdoor/warehouse storage
Transparent Gusset / Window	Clear panel on the gusset or face for product visibility	Rice, specialty grains, retail-facing packs

Industries We Serve

Built primarily around rice and agri-commodity bagging — where DPPL has the deepest experience — and extending naturally into the adjacent bulk-packaging categories that share the same bag construction.

Rice & Grains

Sona Masuri, RNR Kollam, Jeera Rice, Sona Raw & Steam Rice, Boiled Rice, Broken Rice, and other regional rice varieties

Pulses & Dals

Toor Dal, Moong Dal, Bengal Gram, Urad Dal, and other pulses

Flours

Atta, Maida, Rice Flour, Ragi Flour, Gram Flour, Sooji/Rava

Cattle & Poultry Feed

Bulk feed sacks — breathable/ Air tight, Laminated/ unlaminated, Roto gravure printed/ flexo-printed woven options

Fertilizer & Agrochemicals

DAP, NPK Complex, Organic Fertilizer — liner-backed bags for moisture protection

Cement & Construction Materials

Cement, construction aggregates — liner and UV-treated options
